25 August 2022

Weekly Market Update

Primary market environment: Bonjour tristesse! Risk aversion continues to increase in the markets. Gas and electricity prices are going through the roof, exacerbating inflationary pressures. Rising interest rates, economic risks, a weakening euro, geopolitical dangers and ongoing supply chain problems are weighing on sentiment.

Primary market barometer

SSA

Safety is the trump card! In the face of a number of extensive stress factors, it is not surprising that the search for so-called safe assets continues. The renewed success of the ESFS in issuing a dual tranche provides only one indication of this thesis.

Sources: Helaba Research & Advisory

Covered Bonds

Once again, the majority of investors were happy to subscribe to new primary market securities this week. This documents the continued receptiveness of the market, and on the other hand, it seems that longer maturities can be placed again.

Senior Unsecured

The first signs of life are coming from the primary market, but the week shows that some issues only just crossed the finish line. Investors are scrutinizing issuance conditions more closely and the market for transactions is not getting any easier.

The darker clouds gathering over the overall market are leading to a flight into safe assets. Spreads are narrowing as a result, so that the colour green dominates our spread indicator in the short term. In the case of senior unsecureds, risk premiums ran high in the past trading week and widened significantly in all segments on a weekly basis despite recent tightening.

SSA

The SSA segment is currently enjoying great popularity. First and foremost, the security concept plays an important role in the investment decision and ensures solid investor demand. The market-ing spreads generally narrowed noticeably during the book-building phase. In addition to the dual tranche of the EFSF, which was in particularly high demand, the Developbank of Japan (EUR 600 million) and BPIFrance (EUR 500 million) were active. Outlook: Overall, the market is very receptive, so that further transactions can be expected on the primary market in the coming days. This expectation is also supported by the impression that the placement risk for issuers can be assessed as relatively low in view of the favourable framework conditions - e.g. the tendency towards spread tightening. After a longer period of abstinence, promotional banks are likely to appear on the primary market again soon.

Overall, however, it must be assumed that the issue volume in 2022 will not reach that of the previous year. The

„The summer drought in SSAs is long forgotten and the market has been flooded with new issues since last Wednesday. The issues so far have mainly been in the 3 to 10-year range, mostly with good NIPs. Despite the very negative spreads compared to swaps, most of the new issues have performed relatively fast and well in the secondary market. The best example is the new EFSF 1 ½ 12/15/25, which came onto the market on Monday with MS-26 and has since risen by around 5 bp. The ASWs, which have been running out since Monday, should continue to support this tightening trend for the time being.“

Einschätzungen aus dem Handelsraum der Helaba

federal states have been heard to say that some of them may no longer need to issue this year in view of their good capitalisation.

Covered Bonds

The primary market is currently very active. The issues are usually met with very good demand, as the example of BayernLB's 9-year public Pfandbrief (EUR 500 million, WNG) shows. More than EUR 1.5 billion in order volume was recorded, and the original spread narrowed from MS+7 to MS+3. It remains to be

"In the current market phase, there are two decisive factors: On the one hand, the security-driven demand for high-quality assets remains high. The yield advantages of covered bonds are very high due to unabated high premiums of the swap curves compared to Bunds/Core EGBs. As a result, this continues to attract buyers, especially for maturities up to 5Y. The second aspect is the activity on the primary markets, which got back on the track early after an unusually short summer break. Here it can be noted that the new issue premiums offered to investors are still good (4-6 bps on average). "

Comment from the Helaba trading floor

said that as long as the market does not fall into a "pricing euphoria", there is definitely a chance for further constructive weeks. Today, Commerzbank (EUR 1 billion) and Raiffeisen-Landesbank Niederösterreich-Wien (EUR 750

million) were both successful with 10-year benchmark placements. At Commerzbank, the spread tightened from MS+13 (guidance) to MS+9 (books were over EUR 1.65 bn), RLB issued at MS+24.

Outlook: Issuance activity will continue in the coming days. Macquarie Bank has already mandated a 5-year covered. Moreover, autumn promises to be very active, not least due to the fact that the ECB will have to replace many maturities in September. In this respect, many issuers want to escape the expected squeeze on the capital market by realising their issuance plans early.

The **ECB** also remains active: Within the framework of the APP, it increased its covered bond portfolio (CBPP3) by EUR 183 million in the last week.

Senior Unsecured

The reporting season was followed by several new issues this week, showing the tension of the market. For example, Deutsche Pfandbriefbank - despite a defensive maturity of four years and a "green" design - was unable to narrow the initial spread target of MS+250 basis points during the marketing phase. After all, the sustainable use of funds ensured an extremely granular and stable order book.

"Apart from new issues, secondary flows continue to be driven by small volumes of ETF funds. Asset managers and real money accounts are mainly focusing on new issues and are putting further pressure on cash with sales of old holdings. This is not expected to change in the near future, which is why spread widening is expected to continue. It is unlikely that the end of the "summer hole" will be able to counteract this."

Comment from the Helaba trading floor

After the spread widening and the lack of new issues on Tuesday and Wednesday, the illiquidity in the secondary market was high with a nevertheless high number of buyers, which may also explain the **tightening of risk premiums** in the meantime. Today, however, the curves already came under pressure again due to the new issues of BNP Paribas and Deutsche Bank and widened.

Outlook: Although many issuers still want to become active this calendar year, the latest emissions are anything but encouraging. We repeat: the market remains volatile and timing remains a challenge. And so many market participants are probably waiting for a Tier 1 issuer with higher transaction security.

Short news

25.8. Portuguese Covered Bonds: According to Moody's Portugal's **new covered bond law** includes credit positive provisions. The new law has several **positive** provisions, including a requirement for covered bonds to hold a 180 day liquidity buffer and measures to reinforce supervisory powers. Furthermore, the new law defines extendable maturities for covered bonds and regulates certain aspects of maturity extension triggers. Removal of minimum OC requirement for residential mortgage covered bonds is **negative**. The new law removes the previous requirement for residential mortgage covered bond programmes to hold minimum OC of 5.26%, a credit negative change.

24.8. Implementation of the Covered Bond Directive: According to a report by Moody's, as of mid-August 2022, the relevant EU website listed the **national implementation measures of all countries**. In addition, **Norway** had also implemented the new rules, the agency writes. However, discussions with market participants in some countries indicated that the new rules are not yet final in all respects and that there are likely to be some **transition delays and uncertainties** in the coming months. Uncertainties arise in part from the transitional provisions of the new rules and how they will work when grandfathered and nongrandfathered bonds are issued under the same program. The biggest uncertainties would be for Spanish paper.

23.8. Austrian Covered Bonds: Moody's rating agency comments on the **new legal framework** for covered bonds created by Austria under the EU Covered Bond Directive, effective July 8, 2022 (As a reminder, the new Pfandbrief Act combines three previous covered bond laws into a single regulation). Features that Moody's categorizes as **strong** include strong protection against legal risks following issuer default. For example, the law prevents a bank moratorium from preventing payments to covered bondholders. Among the **weaker** features, the agency notes that there are no specific provisions for dealing with future interest rate mismatches between the cover pool and covered bonds, although issuers are required to monitor such risks. However, the law would require the issuer's risk management department to have systems in place to identify and assess interest rate risks.

23.8 Basel III: According to a [press release](#), the Association of German Pfandbrief Banks (vdp) takes a fundamentally **positive view of the proposed amendments to the banking package** submitted by members of the European Parliament and recently published. Representatives of the EPP and Renew Europe groups, in particular, advocated the consideration of specific European market structures in the implementation, e.g. in real estate financing. Thus, on the one hand, there would be support for appropriate equity treatment of residential real estate financing if the credit institution can demonstrate a low-risk real estate financing business. On the other hand, an extension to equally low-risk commercial real estate financing would be brought into play.

Leisure tip for the weekend: Museumsuferfest Frankfurt am Main

On the weekend of August 26-28, 2022, the Frankfurt Museumsuferfest will take place again after a two-year Corona break. Located in the heart of the city, with the skyline in the background, the event attracts around 2 million visitors every year. The festival offers a combination of art/culture, music and culinary delights. Among the extraordinary program points of Frankfurt's museums are various stage productions and shows. A special highlight is the firework display on the banks of the Main River, which takes place on Sunday at 10 p.m. and is the grand finale of the festival weekend. The schedule of events can be viewed at the following link: [Program](#).
