

Focus on: SSAs & Financials

7 March 2024

Weekly Market Update

Primary market environment: The DAX is trading water after recent record highs. As expected, the ECB left interest rates unchanged today. In the US, Fed Chairman Jerome Powell is concerned that cutting rates too soon could jeopardise progress on inflation. According to the US Beige Book, the economy has picked up slightly. The primary market environment remains supportive.

Primary market barometer

SSAs

The backdrop has changed little recently. Due to today's ECB meeting, primary market activity focused on the first half of the week. Notable was the rise in the 2054 bond issued by the Federal Republic of Germany with an order book of EUR 74bn.

Covered Bonds

Canada's Toronto-Dominion Bank made a clear statement in the primary market with a EUR 5.5bn issue and an order book of EUR 11bn. However, the week's other issues also saw strong demand.

Senior Unsecured

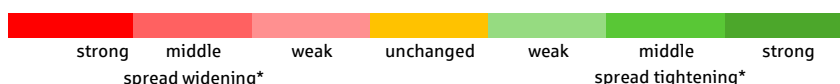

Unsurprisingly, activity remained relatively low this week due to the ECB meeting. Next week's Fed meeting is likely to have a further dampening effect before the primary market picks up noticeably in this area.

Risk trend indicator (heat map): Pessimists have the upper hand

Sources: LSEG, Helaba Research & Advisory

The fluctuations in the colour scheme of our heat map continue. Temporary improvements have been short-lived and the current shift into the red zone indicates a moderate widening of spreads.

SSAs

The situation in the SSA segment has changed little of late. The hoped-for bottoming out of secondary spreads has once again failed to materialise and €-denominations fell a further basis point against swaps over the course of the week. Although the general wave of supply continues to ease, there is still a lack of follow-on buying in the secondary market to clear the now full trading books in the long term.

By far the largest transaction of the week was the EUR 6bn increase in the 2054 **Bund of the Federal Republic of Germany** (final order book: EUR 74bn). Also successful on Tuesday were the **Free State of Saxony** with a 6-year issue (EUR 500m, WNG) and Polish bank Gospodarstwa Krajowego with a benchmark dual tranche (EUR 1bn, 8 years, EUR 1bn, 15 years). One day later, the **State of Berlin** took advantage of favourable market conditions to increase the size of its May 2028 bond and place a new 30-year state bond (EUR 1.25bn). The long tranche with a spread of MS +72bp was particularly sought after by investors.

Outlook: The outlook remains cautious, but we expect further offerings next week. The main focus is likely to be on the ESM, which has already issued RFPs (Request for Proposals) for upcoming transactions. The next EU syndicated issue is scheduled for 18-22 March.

Covered Bonds

Italy's **Crédit Agricole (CA)** and Canada's **Toronto-Dominion Bank (TD)** opened the primary covered bond market on Monday. CA's EUR 1bn issue was in high demand despite its long 12-year tenor and was ultimately 3.4 times oversubscribed. The high spread of MS +85bp may have played a role. TD issued the largest covered euro benchmark bond since the financial crisis with a volume of EUR 5.5bn, divided into one floating rate and two fixed rate tranches. The bookbuilding was also historic at over EUR 11 billion. The 5-year fixed-rate bond started at MS +51 bp and the 10-year bond at MS +63 bp. The spreads were finally set at MS +43 bp and MS +56 bp respectively. This was followed on Tuesday by three more successful issues from **BayernLB** (EUR 500m, 4 years, WNG), **DNB Boligkredit** (EUR 1.25bn, 5 years) and Austria's **Erste Bank** (EUR 1bn, 10 years short). In the case of Erste Bank, the issuer was able to reduce the original spread target from MS +60bp to MS +55bp due to low spread-sensitive demand. Banks and asset managers contributed significantly to the success of the transaction, ensuring a granular and internationally diversified order book. **Commerzbank** was another issuer to opt for a long

„The dynamic demand for primary and secondary covered bonds continues unabated. In some cases, the order books for new issues are reaching levels that we have not seen for a long time. Driven primarily by international investors, many new issues are being launched with a NIP of zero. The "party" then continues with a performance of up to 8 basis points in the days following pricing. In view of this dynamic, it is also increasingly possible to conquer the territory beyond the 10-year mark (Soc Gen 02/36, BPCE 02/36, CARPP 03/36), although in the case of the latter bond it should be noted that there is currently strong demand for paper from the periphery. Bonds from Canada and the Scandinavian region are also very popular these Days”.

Comment from the Helaba trading floor

10-year tenor on Wednesday. With a bookbuilding of EUR 1.85bn, the benchmark (EUR 1bn) was priced 6bp tighter than the marketing at MS + 38bp.

Outlook: Korea Housing Finance Corporation (KHFC), a Korean issuer (see also our publication "[APAC Covered Bonds: Popular securities, limited supply](#)"), is in the starting blocks with a 3-5 year social covered bond. We also assume that other issuers will want to take advantage of the constructive environment in view of the recent issuing successes.

Senior Unsecured

Issuance in the senior unsecured segment was relatively modest this week, hardly surprising given the wait-and-see attitude ahead of today's ECB meeting. In the senior preferred segment, there were two EUR 500m issues - from **SR-Bank** and **Commerzbank**. The maturities were slightly shorter than in previous weeks at 5 and 3 years. The transactions were 3 and 4 times oversubscribed respectively.

In the senior non-preferred segment, a total of EUR 1.5bn was issued. Of particular note was **Banco Sabadell's** EUR 500m 6.5NC5.5 Green SNP. The order book for this transaction was almost 10 times oversubscribed. The spread tightened by almost 40bps during the bookbuilding. The spread tightened further in the subsequent secondary market.

„Following the monthly rebalancing before the ECB meeting, 7-day flows could hardly be more mixed. While we saw constructive flows across the maturity spectrum until the end of last week, most market participants have moved to the sidelines since the beginning of this week. Selling has continued to increase in percentage terms. Real money is mainly selling medium to long maturities. Fast money accounts are trying to grab a few cents in the short maturities with the rising futures. The few purchases have come mainly from retail desks in correspondingly small sizes, preferably in 1,000 denomination bonds.“

Comment from the Helaba trading floor

Outlook: Next week's FED meeting is likely to have a further dampening effect on issuance. However, the following two weeks should see a pick-up in activity, given the high volume of maturities this year, before the Easter holiday brings activity back down.

Chart of the Week

Risk premiums for Canadian covered bonds fall

Bloomberg Covered Bond EUR CA-Index OAS vs. government bonds in bp.

Sources: Bloomberg, Helaba Research & Advisory

Canada's Toronto-Dominion Bank (TD) launched the first issues of the year in this jurisdiction. The strong interest in the issue shows that investors have been waiting for such an offering. The chart shows that since March 2023, the risk premium on Canadian covered bonds over Treasuries has fallen from around 110bp to just under 69bp, in line with the tightening of the Bund swap spread, and is thus only around one basis point above the low reached in May 2022. Overall, this is broadly in

line with the market for such bonds. Nevertheless, the spreads are attractive for investors: average yields of 3.32% can be achieved in the triple-A segment and 3.54% in the short window of 1 to 2 years.

Short news

3/5 German Banking Association on AI in banks: Artificial intelligence (AI) is revolutionising our world and has already established itself as an indispensable tool in numerous sectors, the [Association of German Banks](#) (BdB) points out. AI is used in all areas of the value chain, from research and development to production and service, and its importance is also becoming increasingly visible in the financial sector. Hence, what structural impact will AI have on the financial sector? Read more (DE)

3/4 Spanish Banking Association on digitalisation and inclusion: "The limits of digitisation are related to connectivity and digital skills, which the European authorities are committed to addressing. But they are not alone. For example, the banking sector is spending significant resources on both financial education and improving the digital literacy of all kinds of groups. Each at their own pace, as in the case of the elderly, to ensure that the objective is achieved: to unite and not to separate", says José Luis Martínez Campuzano, spokesperson for the [Spanish Banking Association](#) (AEB).

3/1 ESRB on market liquidity of interest rate swaps: This [European Systemic Risk Board](#) (ESRB) paper examines market liquidity in interest rate swaps (IRS) before and during the global tightening of monetary policy. IRS constitute the single largest derivatives segment globally. Banks and Pension Funds extensively rely on IRS to hedge interest rate risk. Hence, providing an understanding of this market and the drivers of market liquidity is a key research question in the current market context.

Leisure tip for the weekend: Sneaker exhibition, NRW Forum, Düsseldorf

Today there is a real hype around sneakers, which is the focus of the main part of the exhibition. There are collaborations with stars and artists, international brands and designers such as Salehe Bembury, Ruohan Wang and Virgil Abloh. The sneakers are collected worldwide and can cost thousands of euros. As well as futuristic designs, the final section of the exhibition will feature sneakers with innovative technologies such as self-lacing or 3D printing.

Find out more: [Sneaker exhibition](#)
