

Focus on: SSAs & Financials

2 May 2024

Weekly Market Update

Primary market environment: The Federal Reserve left its key interest rates unchanged and the pace of asset reduction will slow from June. It was also stressed that future decisions would be data dependent and there was no clear indication of a rate cut in June. Primary market activity should gradually pick up as the end of the blackout period approaches.

Primary market barometer

SSAs

This week saw two transactions in the SSA segment for a total of EUR 5.25bn. We expect issuance activity to pick up in the near term as soon as the dampening effect of the 1 May holiday and the general blackout of the primary market disappears.

Covered Bonds

A week without a primary transaction is a rarity. However, this is likely to change quickly with the end of the reporting season. The primary market remains fundamentally receptive, as evidenced by the success of recent issues.

Senior Unsecured

Primary market activity in the senior unsecured segment continued to be affected by the ongoing reporting season. Nevertheless, three very successful transactions were completed this week. This again underlines the overall positive sentiment.

Risk trend indicator (heat map): Risk aversion on the rise again

Last week our heat map showed a significant easing. This seems to be over, at least in the short term, and risks are weighted slightly higher.

SSAs

This week we only saw the first primary market transactions in this segment on Tuesday. However, these were characterised by very strong order books. With demand totalling more than EUR 24bn, KfW had no difficulty in successfully placing a EUR 4bn **Green Bond** with a maturity of 8 years. With this issue, KfW has now raised EUR 50 billion on the capital market out of a target of EUR 90 to 95 billion for the year as a whole. Green bonds account for EUR 7 billion of the EUR 10-13 billion target. In the secondary market, the new bond was unable to continue the positive trend in the primary market, with fast money accounts apparently trying to sell the bonds quickly. The Canadian **province of Saskatchewan** was also active on the same day. A EUR 1.25bn 10-year benchmark was priced 3bp tighter at MS + 49bp thanks to an order book of EUR 6.9bn. The NIP was 3bp. The primary market was also quiet due to the May bank holiday. Overall, Wednesday was the fifth trading day with no primary activity (all segments).

Outlook: The fundamentally constructive environment has not changed, so we expect issuance activity to continue, including with various states. The EU has issued a request for proposals (RfP) for another issue in the period 13-17 May.

Covered Bonds

The covered bond segment remained quiet on the primary market stage throughout the week. This was probably due to the 1 May holiday and the associated absence of major players, as well as the end of the month. In addition, some issuers were still in the blackout period.

The "merry month" of May is likely to start on a fundamentally constructive note. Current primary and secondary valuations are generally seen as fair. There are no signs of a slowdown in investor demand, particularly for new issues. Compared with the strong secondary performance at the start of the year, trading is currently a little quieter and momentum has slowed somewhat.

The country allocation is unlikely to change for the time being. Bonds from the euro core countries will continue to be at the bottom of the performance rankings. In around two months' time, the deadline for topping up protected legacy bonds following the implementation of the CBD will expire. In this context, grandfathered means that these bonds do not necessarily have to fulfil all the requirements of the new directive 1:1 in order to qualify favourably for the regulatory requirements. It remains to be seen whether issuers will use the closing time window to top up corresponding bonds, especially as certain requirements regarding residual term, issue volumes, etc. must be met. Possible increases should therefore not have a significant negative impact on the supply-demand ratio.

Outlook: After the temporary pause on the primary market, we expect a noticeable revival in the coming week. The Bank of Queensland already has a 5-year benchmark in the pipeline

"There is much to suggest that spread performance will remain positive, but flatter in the coming weeks. In any case, the key issues for the market as a whole remain intact and have yet to be conclusively resolved for the future. First and foremost is the medium-term trend in interest rates in the world's main economic regions, even if the "safe" path in the eurozone points to interest rate cuts in the short term".

Senior Unsecured

Following last week's issuance of just under EUR 3bn in the senior segment, our expectation of subdued activity was confirmed this week, although there were three issues totalling EUR 2.5bn.

On Monday, UK-based **Barclays** issued a HoldCo dual-tranche benchmark (senior non-preferred) for EUR 1bn and EUR 0.75bn. The 4NC3 short floater was easily placed at €3 + 80bp and the 11NC10 fixed rate, which was also heavily oversubscribed, at MS + 155bp. Both were significantly oversubscribed, allowing the final spreads to be narrowed by 35 bp and 30 bp to €3 + 80 bp and MS + 155 bp respectively.

Banque Fédérative du Crédit Mutuel (BFCM) successfully issued a 7-year senior preferred **green** benchmark (EUR 750m) today. With an order book of over EUR 3.9bn, the spread over the benchmark narrowed by 35bp to MS +110bp.

Outlook: The reporting season for financials is coming to an end. The primary market should therefore pick up again soon.

Chart of the Week

The composition of the iBoxx Covered (here 7-10 years) is re-weighted monthly according to issuance activity. The shifts between January and April 2024 are striking. While France's share fell during this period, Germany and the Netherlands recorded higher weightings. In contrast, the changes for the other countries were relatively small, with Italy and Austria increasing slightly. Overall, the analysis is a snapshot and the weighting could change quickly if, for example, more French

bonds are issued or the share of German and Dutch bonds falls again due to maturities. In the current constellation we estimate the impact on spread developments to be relatively small, especially as France, Germany and the Netherlands are core countries and spreads are already very tight.

Short news

4/30 ESAs risk update: risks remain high in the EU financial system: In their [spring risk update](#) on the EU financial system, the three European supervisory authorities (EBA, EIOPA and ESMA - the ESAs) point out that risks remain elevated against a backdrop of slower growth, an uncertain interest rate environment and ongoing geopolitical tensions. Financial markets have performed well in recent months in anticipation of potential interest rate cuts in 2024 in both the EU and the US, despite the considerable uncertainty that this entails. However, this strong performance would entail an increased risk of market corrections in the event of unexpected events. Credit risk is also likely to rise further as funding needs increase. Although asset quality in the banking sector remains solid, it is likely to deteriorate if economic growth slows further.

4/30 Fitch Ratings Covered Bonds Snapshot - 1Q24: Net supply of benchmark covered bonds was positive in 1Q24, as issuance was above the average of the last decade, outstripping redemption. Noteworthy Fitch-only rated new issues included UBS Switzerland AG's first jumbo mortgage covered bonds in euros. Loans in the cover pool are in Swiss francs, like outstanding covered bonds issuances. The new euro bonds are swapped into Swiss francs and investors are not at risk of recoveries given default denominated in the wrong currency, as the Swiss franc cover assets are on average shorter (4.25 years) than the new liability (five years).

4/26 Fitch Ratings: Asset Swaps Support Stable Excess Spread in UK Covered Bonds Programmes: The cover pool swaps provided by UK covered bonds issuers have supported stable excess spread in their programmes, [Fitch Ratings](#) says. The swaps provide a margin over the UK short-term rate (Sonia), with a median at 1.2% for UK programmes rated by Fitch. This compares to 0.7% for the liabilities margin. This positive differential reduces the break-even over-collateralisation for the 'AAA' ratings of UK covered bonds.

Leisure tip for the weekend: Dyck Castle (NRW)

Dyck Castle in Jüchen is one of the most important moated castles in the Rhineland. Rhineland. The complex consists of a main castle and two outer castles surrounded by a moat. The castle has a triple moat system. The park was laid out in 1794 in the style of an English landscape garden. The German Foundation for Monument Conservation recognises the park for its 'remarkable number of valuable trees and plant rarities'. The castle has been administered by a foundation since 1999.
