9 June 2023

Weekly Market Update

Primary market environment: There continues to be huge new issuance activity in the primary markets. This is putting increasing pressure on the secondary markets. Recent sentiment indicators in the euro area have been largely disappointing. According to ECB Governing Council member Knot, inflation in the euro area could remain high for a long time.

Primary market barometer

SSAs

The majority of the large SSA names enjoyed good demand. Accordingly, pre-market activity in the segment is likely to continue, although there is a trend towards increased price sensitivity and some issuers are already "ahead" of their pro-rata funding plan.

Covered Bonds

The primary market continues to operate at high speed. Once again, there was good demand for 10-year covered issues, provided the right deal structure was used. Unicredit SpA and Credit Agricole Italia were the first Italian issuers in more than a year.

Senior Unsecured

The primary market for senior unsecured bank bonds remains extremely active. Recently, however, issuers have been making concessions regarding new issue premiums. Open market windows will be further tapped before the summer break and the next quarterly reporting season.

Risk trend indicator: Inconsistent picture

Our Risk Trend Indicator currently shows a mixed picture. While sentiment continues to improve in the very short term, there is no clear trend in the medium term.

SSAs

Once again, the SSA segment saw strong issuance this (shortened) week, led by the EU and KfW (EUR 5 bn tap). As usual, the EU was heavily oversubscribed, with the EUR 3 bn tap maturing in 2029 10.4 times oversubscribed and the EUR 4 bn tap maturing in 2042 11.2 times oversubscribed. Ile-de-France Mobilités had a full order book and was ultimately 9 times oversubscribed for its EUR 500m green bond maturing in 2028. However, not every new issue attracts sufficient investor interest, as recently demonstrated by the EUR 500m issue of the Land of Berlin. Overall, there are now clear signs of a gradual saturation of the primary markets.

Outlook: We are gradually entering the round before the summer break. Saxony-Anhalt has completed a social bond roadshow and is expected to come to market next week. The state of Baden-Württemberg is informing investors about a green benchmark. Overall, many issuers in the SSA segment are already well "ahead of schedule", i.e. ahead of the pro-rata funding budget. The state of North Rhine-Westphalia, for example, has almost reached its funding target for the current year.

Covered Bonds

Last week, 3 new issues were placed and this week, despite a holiday on Thursday, a total of 8. Commerzbank started with a dual tranche of 2.5 and 10 years. Both were able to tighten 2bp from guidance. However, demand was somewhat lower than we had expected. A high number of senior transactions at the same time may have contributed to this. In the end, the issuer had to accept a new issue premium of 6-7bps. Once again, 10-year maturities have shown that they can attract buyers if the deal is properly structured, which means that covered issuance in this area could continue to gain momentum.

"In the secondary market, the days of the "free lunch" are finally over! With the primary focus increasingly on longer maturities and generally generous NIPs, it was initially hoped that further momentum would be generated thereafter. Unfortunately, the opposite has been the case. At best, spreads are treading water at elevated levels. What is more, the transactions are far from complete; there is still plenty of free float that is difficult to sell. Admittedly, a certain degree of saturation in the market speaks in favour of this performance (too much material in too short a time). Moreover, the gradual withdrawal of the official purchase programmes (announced by the ECB) is not only a material problem, but also a subconscious psychological one for the market (especially the market makers)".

Comment from the Helaba trading floor

On Tuesday, Unicredit was the first Italian issuer to return to the primary market following the recent completion of the implementation of the new legal framework for the issuance of Italian OBGs (Obbligazioni Bancarie Garantite). The issuer's first issue after an absence of around 7 years was also the first covered issue from Italy for more than a year and attracted considerable attention. The covered dual tranche, with a 3-year and a 7-year soft bullet format, generated total issue proceeds of EUR 3 billion and was able to narrow the initial spread on both tranches by a remarkable 8 basis points due to strong investor demand. Unicredit's strong performance is likely to have paved the way for other Italian issuers to follow suit.

Natixis' sub-benchmark Pfandbrief issue, on the other hand, struggled, possibly due to pricing that was too expensive in the eyes of the market. The arrangers at Natixis Pfandbriefbank were unable to narrow the initial spread target of MS+3 bp or to publish an order book for the 2.5-year EUR 250 million (no grow) mortgage Pfandbrief issue.

Wednesday saw another OBG issuer, Credit Agricole Italia. The EUR 1bn 6-year covered issue was priced at MS+59bp versus MS+63bp in the market. Both Eika Boligkreditt (EUR 500 mn, WNG, 10 years) and Münchener Hypo (EUR 500 mn, WNG, 7 years, green) saw their final spreads pricing 2 bps inside guidance. Although all of Wednesday's new issues were successful, order book dynamics and oversubscription were rather disappointing.

Outlook: After a quiet end to the week due to the holiday, primary market activity is likely to continue next week, especially with a number of projects already in the pipeline. Meanwhile, the upcoming central bank meetings are increasingly coming into focus.

Senior Unsecured

The primary market for senior unsecured bank bonds continued to be very active. At the start of the week alone, the order books were opened for six senior unsecured transactions in EUR benchmark format, with a combined volume of EUR 5.35 billion. In the course of the week so far, the issuance volume totaled EUR 7.95 billion, despite the public holiday on Thursday. This compares with cumulative investor interest of EUR 14.9 billion. Of the 11 issues, six were on preferred rank. As many as four transactions were green bonds.

However, the high order books were partly achieved by noticeable **concessions in new issue premiums**. At the same time, the secondary market is coming under increasing pressure.

Outlook: High maturities and strict bail-in capital requirements are driving primary market activity in senior unsecured bank bonds. Friendly market windows are actively exploited by issuers, especially as the summer vacations begin in the Scandinavian countries at the end of June.

"The good sentiment opened the window for new issues. French issuers in particular took advantage of the opportunity. A rarity and surprise was the first green issue from the US banking sector, from Bank of America. Secondary performance was positive on average. Outperformer with a tightening of 11 bps to the ReOffer is the 34 non-preferred fixed to float bond of BPCE. Investor flows over the past 7 days continue to be well mixed."

Chart of the Week

The widening of the spread differential between Senior Preferred (SP) and Covered Bonds, which started in February, has continued recently. In our view, this is due to the huge number of SP primary market transactions. (The difference in issuance volumes between the two asset classes can also be seen graphically in the slope of the issuance curves in the bottom two charts on the left-hand side of page 6). On the basis of trend-following models, we be-

lieve that this trend is likely to continue.

Short news

6/5 Central banks successfully test 'quantum resistant' communications channel: A secure communication channel to protect financial data against future threats from quantum computers has been successfully established by the BIS Innovation Hub Eurosystem Centre, in concert with Banque de France and Deutsche Bundesbank. The BIS says the experiment acts as a blueprint for the financial system to build a complete chain of trust for central bank applications in the post-quantum world, [Finextra](#) reports.

6/1 Responsible Banking - What does PRB mean for banks: The UNEP FI's Principles for Responsible Banking (PRB) aim to mobilize private finance to address the nature, climate, and pollution crises. Mete Feridun, Chair of the EMU Centre for Financial Regulation and Risk explores the requirements for signatory banks in a blog published by [Finextra](#).

Leisure tip for the weekend: Treetop path Bad Camberg

A 600 metre walk through the crowns of the Hintertaunus in Bad Camberg.

The path leads over ramps and stairs to a height of 28 metres with wonderful views.

More information:
